SUMMARY

Full Stack Developer with hands-on experience building and shipping production systems at scale — from AI-powered hiring platforms processing **115,000+ CVs** to OTT metadata pipelines spanning **80,000+ hours of content**. Comfortable owning both frontend and backend: Next.js interfaces, FastAPI microservices, and distributed systems with RabbitMQ and Docker. Thrives in fast-moving product environments where ownership is high and ambiguity is the norm.

EDUCATION

Rashtriya Raksha University
B.Tech in Computer Science & Engineering

Gandhinagar, India
June 2021 – May 2025

EXPERIENCE

Software Developer

Ekesa Tech

June 2025 – Present

Ahmedabad, India

- Engineered an AI-powered resume parsing engine that has processed **115,000+ CVs**, eliminating dependency on third-party software and replacing a fully manual hiring workflow end-to-end.
- Refactored a resource-intensive legacy search query, significantly reducing response latency and improving result delivery speed across the platform.
- Migrated a monolithic architecture to event-driven microservices using RabbitMQ — offloading bulk resume uploads (500+ files) to background queues, enabling uninterrupted access to all platform features during processing, and powering a mass candidate invitation mailing service.
- Built and deployed RESTful APIs using FastAPI, containerized all services with Docker, and delivered a responsive frontend in Next.js backed by Supabase for authentication.

Software Development Intern

Biztic Technologies

Jan 2025 – May 2025

Ahmedabad, India

- Built C# parsers to extract and normalize metadata across an OTT platform spanning **80,000+ hours of on-demand content** and **81 live channels**, achieving **~95% parsing accuracy** across detail pages, seasons, movies, showcases, and branded content.
- Designed and owned end-to-end data pipelines — ingestion, cleaning, normalization, and transformation — enabling downstream analytics on a previously unstructured content catalogue.
- Developed a title pricing prediction model using XGBoost and Random Forest on competitor sales data, achieving **85% accuracy** and enabling data-driven content acquisition decisions.

PROJECTS

Audit Sphere – Governance, Risk & Compliance Tool | C#, .NET, MySQL

- Built a desktop GRC application for **ISO 27001 and NIST framework compliance**, replacing manual spreadsheet-based assessments with a structured, automated audit workflow.
- Implemented control mapping, auditor role assignment, audit lifecycle execution, and automated report generation with role-based access control.
- Delivered a real-time compliance dashboard with visual tracking metrics, giving compliance teams instant visibility into their control posture.

Sentiment Analysis on Twitter (Demonetization Study) | Hadoop, Apache Pig, NLP

- Processed a **20GB Twitter dataset** on a Hadoop/Cloudera cluster using Apache Pig for distributed transformation; applied NLP sentiment classification to India's 2016 demonetization discourse with trend visualization.

Genius AI – Multi-Modal AI SaaS Platform | Next.js, OpenAI API, Gemini API

- Built a multi-modal AI platform integrating OpenAI and Gemini APIs to support **code generation, image synthesis, and music creation** from a single Next.js interface.
- Designed asynchronous API orchestration to handle concurrent requests across multiple AI providers without blocking the UI.

TECHNICAL SKILLS

Languages: Python, C#, C/C++, JavaScript, SQL
Frontend: Next.js, React, Node.js
Backend: FastAPI, .NET, RESTful APIs, Microservices, RabbitMQ
Databases: MySQL, ClickHouse, Supabase
ML & Data: XGBoost, Random Forest, NLP, Pandas, NumPy
DevOps & Tools: Docker, Git, Hadoop, Apache Pig
